

**Eliminate That Belbox!**

**Setcom Eliminator Radio Adapters for Jedi Series Portables**

For years, motor officers have been looking for ways to reduce the amount of gear on their belt. A few years ago, Setcom introduced the KA Helmet Kit with a built-in microphone amplifier that eliminated the belt-box with motorcycle-mounted radios. Now, the Eliminator Series of radio adapters for Motorola JEDI portables (including the HT1000, MT2000, MTS2000, XTS3000 and MTX Series) eliminates the belt box in portable-only and dual-radio configurations. In addition, the auto-switching feature automatically switches the helmet microphone and speakers from the motorcycle radio to the portable radio whenever the connection to the motorcycle radio is broken.

The Eliminator may be used with KE microphones used in portable-only configurations and KA microphones used in mobile-only and dual-radio configurations. The Eliminator is available in an adapter-only version (with a jack mounted on the connector for use with a helmet extension cable); or in a cabled version that eliminates the need for an additional cost of an extension cable. Both configurations are depicted at right with a photo of a C4A configured for portable and motorcycle mounted radios with auto-switching.
