Police Motorcycle Communications

Setcom invented the first communications kit for police motorcycle officers in 1970 and has been the leader in the field ever since. While others have come and gone, Setcom owes its longevity to its quality and innovation. Public safety professionals in all fifty states, most major U.S. cities and more than twenty countries worldwide rely on Setcom.

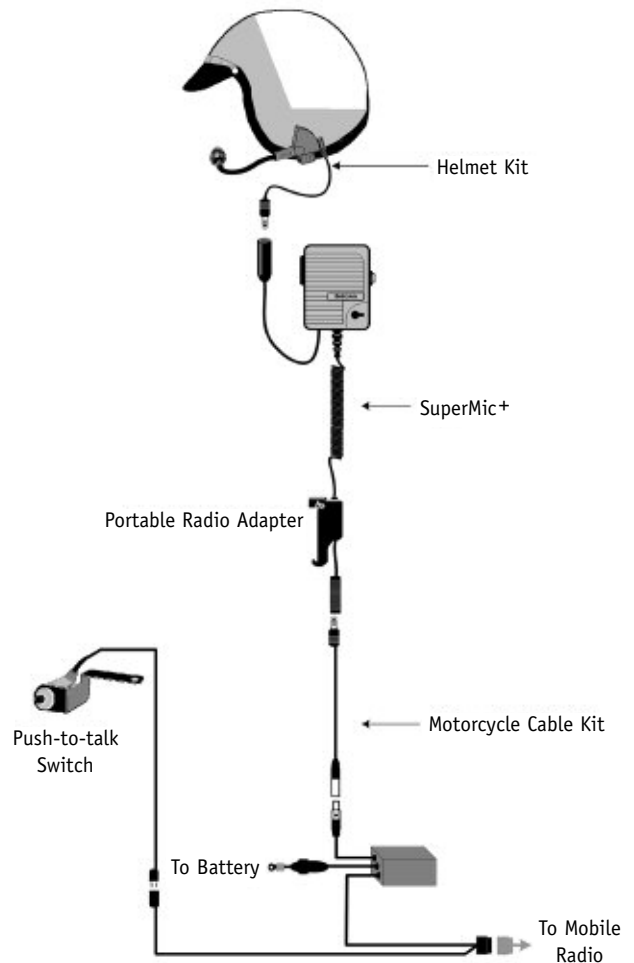

Tradition of Quality, Experience and Innovation

- Premier communications systems and accessories for all widely-used portable and motorcycle mobile radios.
- Outstanding quality and durability; time-tested designs: Setcom's products have been designed, engineered and assembled in the USA for 37 years. Thousands of police motor officers rely on Setcom's equipment every day.
- Meticulous attention to quality: No product leaves Setcom without being fully tested. Your satisfaction is our highest priority.
- Customer-driven innovation: Setcom will work with you to develop a system that meets your needs.
- Generous demo program allows you to put Setcom's products to the test, risk-free.

Unequaled Service and Support

- Dedicated technical support available 55 hours every week.
- Responsive, in-house service department, combined with fully repairable parts and components, decreases your lifetime cost of ownership. Setcom's longevity and reputation for consistent service and support are unmatched.
- One-year warranty on system components and workmanship.

Representative ComKit

ComKit™ Product Offerings

Motorcycle Cable Kit	Setcom's cable kits allow you to safely key your radio and/or transmit over your public address system without taking your hands off the handlebars. Most states require that motorcyclists have both hands on the handlebars at all times.
SuperMic™	Since their introduction, the SuperMic and SuperMic+ have rapidly become some of Setcom's most popular products.
Liberator™ Wireless	The most recent advance in police motorcycle communications, Setcom's Liberator Wireless system eliminates the cable between you and the motorcycle, giving you maximum flexibility, freedom of movement and reliable communications.
Helmet Kit	Setcom uses the highest quality speakers and microphones available to make its Helmet Kits. Kits are available for all helmet types: half shell, three-quarter shell and full face.

Liberator Wireless

Setcom

Liberator™ Wireless

The most recent advance in police motorcycle communications, Setcom's Liberator™ Wireless system eliminates the cable between you and the motorcycle, giving you maximum flexibility, freedom of movement and reliable communications.

The Liberator uses commercially reliable wireless technology to ensure that you're always in contact.

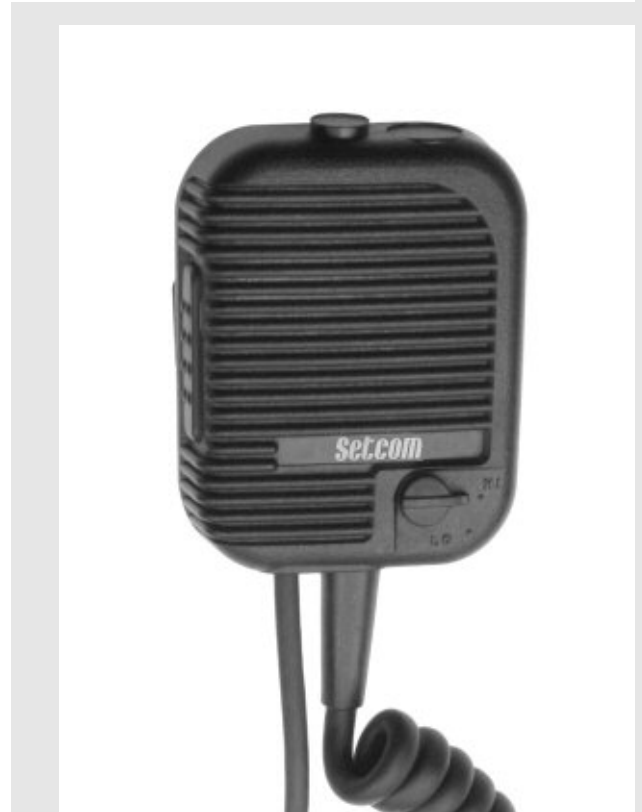

- The Liberator automatically establishes a wireless link when you press the push-to-talk button on your motorcycle. There is no need to "sync" or "pair" the system to the motorcycle.
- In a Mobile + Portable Radio configuration, the Liberator transmits and receives through the mobile radio, ensuring consistent communications.
- With its selectable channel plan, the Liberator has been carefully designed and rigorously tested to eliminate extraneous communication between two police motorcycles and/or between the Liberator and your portable or mobile radio.
- The Liberator includes wireless technology for Portable Radio Only as well as Mobile + Portable Radio configurations.

Setcom's Liberator is without equal for quality and reliability.

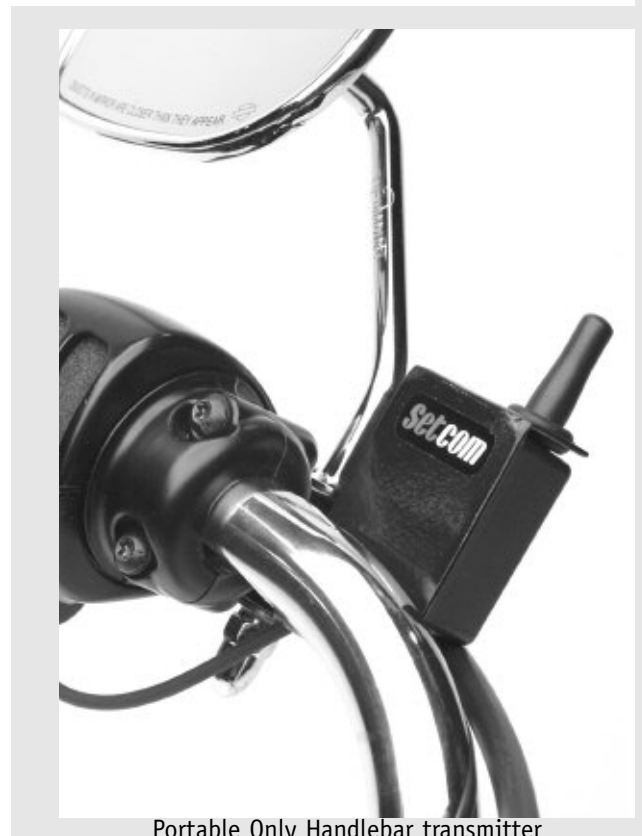

- The Liberator's efficient power management technology eliminates the need to recharge batteries, a potentially critical point of failure. It draws the minimal power it requires from the portable radio battery.
- As with Setcom's traditional SuperMics, the Liberator's helmet connection provides a quick-release jack to ensure your safety.
- All of the electronics necessary to achieve the Liberator's sophistication are surface mounted on Setcom's proprietary circuit boards.
- Surface-mount technology is superior to hand-wired circuits which are prone to mechanical failure; this yields significantly higher quality and durability.

The Liberator's unique design features make your life easier and save you money.

- Setcom designed both Liberator configurations (Portable Radio Only as well as Mobile + Portable Radio) with easy installation in mind.
- In Mobile + Portable Radio configurations, the Liberator's wireless link allows you to use your motorcycle's public address system, even when you're 50 feet away!
- The Liberator is completely compatible with Setcom's traditional Helmet Kits, making it easy and affordable to upgrade.

Portable Only Wireless SuperMic

Portable Only Handlebar transmitter

ComKits

Setcom

ComKits™

Setcom has been the leader in radio accessories for police motorcycles since 1970. The company's communications kits (ComKits™) ensure clear, reliable communication even in the most demanding environments.

Setcom offers ComKits in three varieties, one for each of three possible radio configurations: Mobile Radio Only; Portable Radio Only; and Mobile + Portable Radios. In all varieties, ComKits are made up of three components:

1 Motorcycle Cable Kit

Setcom's Motorcycle Cable Kits have been in use for more than 30 years, allowing you to safely key your radio and/or transmit over your public address system without taking your hands off the handlebars. Setcom's Motorcycle Cable Kits include:

- Radio interfaces that work with all widely-used police mobile radios; plugging a Setcom system into a police motorcycle radio will not void the radio's warranty
- Powder-coated brackets, custom-designed to fit all police motorcycles
- Shielded cabling and rugged push-to-talk switches
- Break-away connections throughout, making installation and maintenance easy and economical
- Optional public address (PA) system interface, which works with all PA systems used on police motorcycles
- Optional Auto-Switching between your portable and mobile radios. When you're on the motorcycle, you transmit and receive using your mobile radio. When you're off the motorcycle, transmit and receive automatically switches to your portable radio.

2 Connection Between Motorcycle and Helmet Kit

With many options for connecting a Motorcycle Cable Kit to a Helmet Kit, Setcom has a solution for every budget. Below are Setcom's more popular alternatives:

- *SuperMic™* - Since their introduction, the SuperMic and SuperMic+ have rapidly become the most popular option for connecting a portable radio to Setcom's Motorcycle Cable Kit on one end, and Setcom's Helmet Kit on the other (please see SuperMic brochure for more detail).
- *Liberator™ Wireless* - Setcom's newest product, the Liberator Wireless system eliminates the cable between you and the motorcycle, giving you maximum flexibility and freedom of movement (please see Liberator Wireless brochure for more detail).
- *Eliminator™ Kit* (for Motorola JEDI Series portables) - The Eliminator Kit links a portable radio to Setcom's ComKit. At the top and bottom of the Eliminator portable radio adapter, cables connect to the Helmet and Motorcycle Cable Kits, respectively. A sophisticated circuit board in the portable adapter provides an auto-mute feature. Plugging in your Helmet Kit mutes the portable radio's speaker. Conversely, unplugging activates the portable radio's microphone and speaker, allowing you to use it normally.

3 Helmet Kit

Setcom makes its Helmet Kits using the highest quality speakers and microphones and offers a kit to fit every police motorcycle helmet.

- Thin, lightweight speakers (less than 2 oz.) are comfortable and specifically designed for radio traffic in the voice frequency range; they are loud enough to be heard on a motorcycle without distortion, even at pursuit speeds. A modular plug makes them easy to repair or replace.
- Waterproof, noise-canceling microphones are ideally suited for the radios with which they're intended to work, providing a superior signal-to-noise ratio and clear voice transmission. A flexible-boom with two counter-wound beryllium-alloy springs resists work-hardening and fatigue.

SuperMic

1-888-6-SETCOM www.SetcomCorp.com

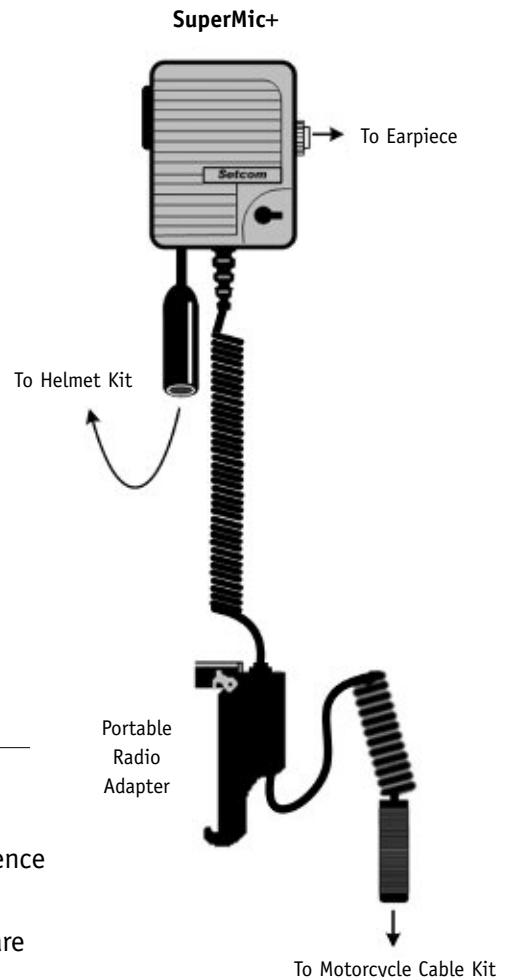

Setcom

SuperMic™

Since their introduction, the SuperMic™ and SuperMic+ have rapidly become some of Setcom's most popular products.

The SuperMic's versatility allows you to use it in multiple ways, and with sophisticated electronics, the SuperMic does all of the switching for you! The SuperMic operates in three modes:

- When you're off your motorcycle with your Helmet Kit plugged in, you hear and transmit over the portable radio using the speakers and microphone in your helmet. The SuperMic's push-to-talk button keys the radio.
- When you unplug your Helmet Kit, the SuperMic's microphone activates, allowing you to use it as a conventional speaker-mic.
- When you plug into your Motorcycle Cable Kit, the push-to-talk button on your motorcycle's handlebars keys the radio. In Portable Radio Only configurations, you continue to transmit and receive over the portable radio; in Mobile + Portable Radio configurations, you automatically transmit and receive over the mobile radio.

Quality is the SuperMic's Hallmark

- Many of the electronics necessary to achieve the SuperMic's intelligence are surface mounted on Setcom's proprietary circuit boards.
- Surface-mount technology is superior to hand-wired circuits which are prone to mechanical failure; this yields significantly higher quality and durability.
- The SuperMic's helmet connection provides a quick-release jack to ensure your safety.
- Setcom stands behind the SuperMic with unmatched, dedicated technical support, an in-house service department and a one-year warranty.

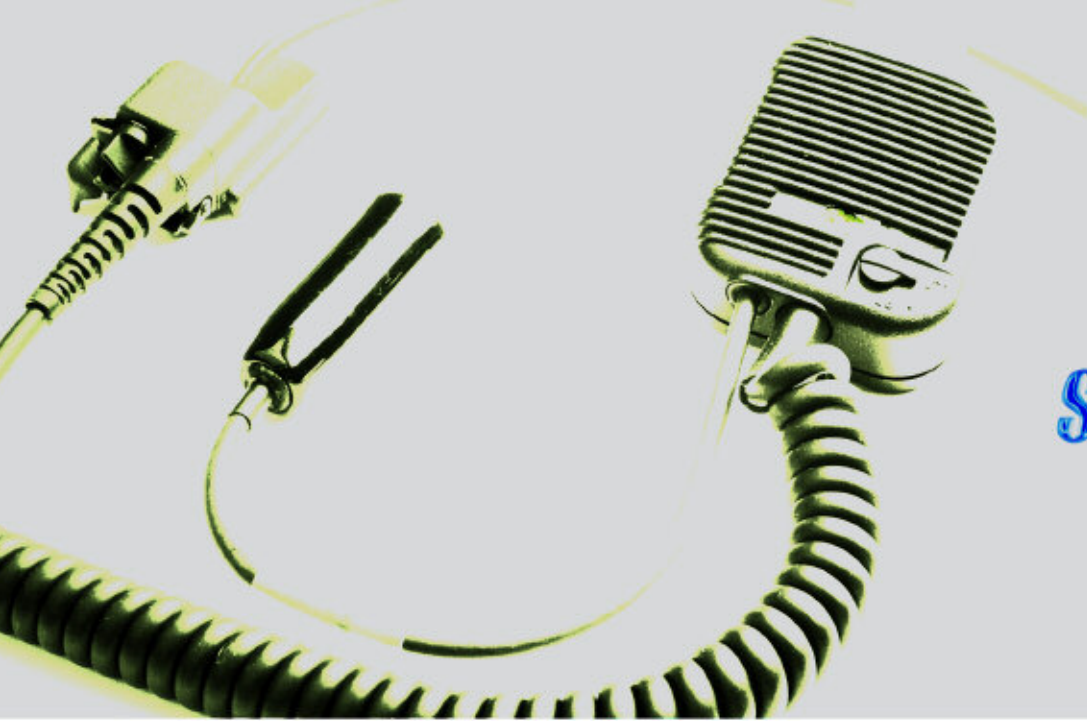

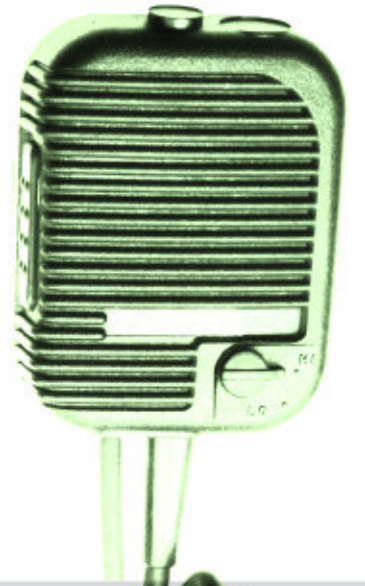

Setcom Offers a SuperMic™ for Every Situation

- Setcom offers the SuperMic in two models, the SuperMic and the SuperMic+, both of which work with all widely-used portable radios.
- In addition to the versatility described above, the SuperMic+ allows you to mute its speaker:
 - For Motorola JEDI Series portable radios, the SuperMic+ automatically mutes its speaker when you plug in your Helmet Kit; when you unplug, the speaker activates.
 - For portable radios other than Motorola's JEDI Series, the SuperMic+ includes a three position toggle, allowing you to switch the speaker from "Hi" to "Low" to "Mute".
- The SuperMic+ also includes a 2.5mm jack into which you can plug an earpiece, allowing you to discreetly monitor radio traffic when you're not wearing your helmet.
- Both SuperMic models can be configured to work with or without a public address system.
